

E46LTW

THE TRIPLE CAMERA IS PURE POWER

The E46LTW presetter machine is equipped with three cameras for the front, side and top vision of the tool.

The system provides tool manufacturers and regrinders the ability to measure all the geometric characteristics of the tool.

The expression of technology at the highest levels.

E46LTW is equipped with the spindle holder identification system (SP-ID). The system allows the presetter to identify the spindle-holder and suggests the correct machine origins, each time the spindle holder is changed.

The powerful industrial PC, developed by Elbo Controlli NIKKEN, supports our machine management software: intuitive and easy to use, this is our motto.

Direct transfer of tool offsets to numerical control tool tables, customizable tool tables, multi-measurement tool on-screen and much more.

Ever easier, no possibility of error.

QUALITY AND EFFICIENCY IN A SINGLE PRODUCT

The fine adjustments, through two handwheels, are indispensable for the final collimation of the cutting edge of the tools.

The ergonomic design and location of manual axis movements and controls allow for fatigue-free working.

SIMPLE. POWERFUL. FLEXIBLE.
