

# E68B

The E68B preset is an easy and simple tool which improves and increases productivity and production efficiency which consequently helps to reduce costs.

We chose to use **NATURAL GRANITE** as part of the structure because it is the best for the job: this unique material offers dimensional and thermal stability, durability just to name some of the advantages.

## Why don't use granite for optical scales?

All E68 models are equipped with GS371 optical scales with natural granite ruler on the X and Y axis. The level of precision and consistency of measurements is extremely high due to thermally stability and zero mechanical calibration.

## INTERCHANGEABLE SPINDLE

All Elbo Controlli NIKKEN spindle holders are interchangeable which avoids coupling errors.

After meticulous construction and rigorous testing procedures, we guarantee results: the run-out error is less than 2  $\mu\text{m}$ .

Why limit yourself to using an adapter?  
**The real strength is the interchangeability.**

## HIGH LEVEL PERFORMANCE

How is it possible to measure a micron which is 50 times smaller than an human hair?

Simple, with a high performance camera system where each element has been specifically designed and built exactly for this function.  
Seeing is believing.

**SIMPLE. INTUITIVE. SOLID.**
