

SETHY SIX

INTERCHANGEABILITY IS THE STRONG POINT

The spindle-holder, with mechanical rotation brake, is interchangeable for any type of machine spindle connection. Replacement is easy and guarantees maximum precision.

Rotate everything around your needs.

Sethy SIX is a presetting machine which spans all company objectives and divisions, regardless of the industry.

Using natural granite for the base and column guarantees maximum precision. The thermal expansion coefficient of natural granite means the machine can operate in the workshop, while the stainless steel structure of the machine makes the preset solid and robust.

Movement of the axes is manual via a single button which releases both axes. Once the tool is set, use the fine adjustment to collimate the measurement.

THE POWER OF SOFTWARE

TD SIX software is developed by Elbo Controlli NIKKEN: you can acquire tool measurements then insert them in the tool table and create a file containing the tool correctors.

Our TD SIX software processes data in over 50 CNC post-processor formats.

If you cannot find yours, contact us and we will provide it at no additional cost.

USER FRIENDLY. ERGONOMIC. TECHNOLOGY.
